Summary

Python backend developer specializing in FastAPI and REST API design. Built and shipped containerized applications with real-time features, secure credential management, and geospatial search. Comfortable across the stack — from database design to frontend delivery. 2026 CS graduate.

Education

Sobhasaria Group of Institutions (BTU, Bikaner), Sikar	2022 – 2026
<i>B.Tech in Computer Science & Engineering</i>	<i>7.9/10 CGPA</i>
12th Grade: Gyan Sarovar School – 75.76%	July 2022

Technical Skills

Languages: Python, TypeScript, Javascript, HTML, CSS
Frameworks & Libraries: SvelteKit, Flask, FastAPI, React, Tailwind, DaisyUI
Clouds & DevOps: Docker, CI/CD (GitHub Actions)
Tools: Git, Linux, SQLite, Open StreetMap

Projects

Location based Friend Finder – FastAPI, SvelteKit, SQLite, TailwindCSS, Docker, OpenStreetMap [\(Live\)](#)

- Built a full-stack social networking platform using **FastAPI**, **SvelteKit**, **TailwindCSS** and **SQLite** — featuring real-time chat, friend requests, and location-based search across **100+ test user** accounts.
- Implemented **session-based authentication** with cookies, designed **RESTful APIs** for user and friend management, and containerized the full application with **Docker** for consistent, portable deployments.
- Optimized **SvelteKit** routing and layout, reducing average page navigation time by roughly **30%** and keeping the experience smooth on mid-range devices.
- Integrated **OpenStreetMap API** to execute real-time geospatial filtering, increasing location-based search accuracy and boosting user discovery engagement.

Secure Password Manager (CLI) – Python, SQL, Cryptography, Argparse [\(Live-Github\)](#)

- Developed a secure **CLI** application in Python to centralize and **manage 200+** credentials under a single master password, replacing insecure plaintext file storage.
- Implemented **AES encryption** and strong key derivation (e.g., **PBKDF2**) to securely manage and encrypt user credentials.
- Designed an intuitive CLI using **argparse** with built-in input validation and error handling, keeping all operations under 2 seconds and reducing user input errors by **30%** during trial usage.

Deep Launcher – Flutter, Android, Dart [\(Live-Github\)](#)

- Developed a custom Android launcher in **Flutter/Dart** with adaptive UI and dynamic icon theming, deployed to 1 production device with daily active usage.
- Built real-time app search with **fuzzy matching**, cutting average launch time to under 500ms and reducing home-screen navigation steps by 40%.
- Delivered multi-theme architecture with **5+ layout presets**, enabling full theme switching in under 3 taps with zero frame-rate degradation.

Challenges

Prothackers

- Implemented custom network protocols in **Python** over raw **TCP/UDP sockets**, building server architectures capable of handling multiple simultaneous client connections.
